

RAKSHITH N

Full-Stack Developer | Node.js & React (MERN Stack)

Bengaluru, India - 560111 | +91 8431284855 | rakshith14022001@gmail.com | LinkedIn: Rakshith N

CAREER OBJECTIVE

Full-Stack Developer with 3 years of experience building and deploying enterprise-grade web applications using Node.js, React and the broader MERN stack. Proven track record of designing REST APIs, building dynamic, component-driven frontend interfaces, and integrating with third-party and enterprise systems for global clients including Apollo Tyres and Johnson Controls, Saudi Arabia. Strong grip on Node.js, Express.js, PostgreSQL and MongoDB, with hands-on expertise in JWT/OAuth-based authentication and authorization, Docker-based microservices deployment, and cloud platforms such as AWS and Azure. Adept at clean application design, debugging complex integration issues, and contributing to development teams to deliver high-impact solutions on time. Currently exploring opportunities to bring this experience to open-source and product-driven engineering teams.

CORE SKILLS

Backend Development: Node.js (core strength), Express.js, RESTful API design & architecture, JWT & OAuth2-based authentication and role-based authorization, Multer, event-driven integrations (webhooks & message-based sync)

Databases: PostgreSQL, MongoDB, Mongoose, SQLite (local development)

Frontend / Web: React.js, HTML, CSS, JavaScript, jQuery, Tailwind CSS, Bootstrap

Cloud & Storage: AWS, Microsoft Azure, cloud-based file & document storage services

Architecture & DevOps: Microservices, Docker, Socket.io (real-time communication), Caching Strategies, Job Schedulers, API Gateway-based service integration

Version Control: Git & GitHub

Other Frameworks: Laravel (MVC), PHP (basic working knowledge)

Practices: Clean application design & architecture, Test-Driven Development (TDD), debugging & root-cause analysis, MVC pattern, team leadership

PROFESSIONAL EXPERIENCE

Full-Stack Developer (Node.js & React)

Nov 2024 - Present

AIRDIT Software Services | Bengaluru

- Spearheaded a development team delivering full-stack **Node.js and React** solutions for enterprise clients, earning recognition from leadership and direct commendation from end clients.
- Designed and built **Node.js/Express REST APIs** alongside dynamic, component-based **React** frontend applications for diverse business workflows.
- Delivered projects for **Apollo Tyres** and **Johnson Controls, Saudi Arabia**, covering supplier management, asset management, master data governance and warehouse management domains.
- Implemented authentication and authorization using **JWT** and **OAuth2**-based identity providers, ensuring secure role-based access across applications.
- Consumed and integrated numerous third-party and enterprise **REST APIs**, plus event-driven integrations via webhooks and message-based synchronization.
- Deployed and managed **Dockerized microservices** on cloud platforms (**AWS/Azure**), leveraging an internal **API gateway** layer for secure service-to-service connectivity.
- Configured custom internal **admin dashboards and portals** with role-based navigation tailored to individual client requirements.
- Built and maintained backend services using **Node.js**, with data persistence across **PostgreSQL** and **MongoDB**.
- Developed a custom library to parse structured query parameters into equivalent **MongoDB aggregation queries**, enabling flexible, filterable REST APIs.
- Designed **custom draft mechanisms** for multi-step forms to support save-as-draft and multi-stage editing workflows ahead of final submission.
- Built a **mass upload feature** with dynamic Excel template generation (using **ExcelJS**) for bulk data entry, including validation and error reporting for rejected rows.
- Implemented **scheduler-based data synchronization** jobs to keep application data in sync with external systems on a recurring basis.
- Adopted **microservices** architecture and **Docker** for containerized deployment of independent services, and used **Socket.io** to build real-time features such as live notifications and status updates.

- Applied **caching strategies** to reduce redundant database/API calls and improve application response times, and followed **Test-Driven Development (TDD)** practices to improve code reliability.
- Worked extensively with **AWS** and **Azure** for scalable file/document storage across applications.

Full-Stack Web Developer (MERN Stack)

May 2023 - May 2024

KODS Technologies | Bengaluru

- Built and shipped full-stack web applications using **React.js, Node.js, Express.js and MongoDB (MERN stack)**, along with **Laravel/PHP** for select projects.
- Developed **ATOMS**, a comprehensive school management platform with dedicated student and parent panels, serving 300+ users and improving parent-teacher communication.
- Built **ADBROVZ**, a services/products marketplace application in Laravel with robust validations, managing 4,000+ promotional listings.
- Developed **TAGNCASH**, a coupon-sharing platform (PHP, Laravel, jQuery, Bootstrap) with email-API-based OTP validation, handling 500+ monthly coupon redemptions.

KEY PROJECTS

Supplier Portal - Vendor Management Platform

- Built a multi-module supplier portal (Node.js/Express backend, React frontend) covering supplier onboarding, approval hierarchy matrix configuration, dynamic form configuration, empanelment analytics and reporting, service entry sheet creation, RFQ creation with price comparison, and invoice creation.
- Integrated OCR-based document processing, Microsoft Teams meeting scheduling, automated mailing, purchase-order confirmation workflows, configurable business rules, shipment tracking, and compliance checks.
- Implemented efficient large-file transfer using Node.js streams, and built a **mass upload feature** with auto-generated **Excel (ExcelJS) templates** for high-volume master data.
- Designed **custom draft mechanisms** allowing suppliers and internal users to save partially-filled forms and resume later, and set up **scheduler-based data sync** jobs to keep the portal aligned with external systems.
- Built a **Supplier Marketplace module** for lead generation, integrating with **Apollo.io** to source and enrich prospective supplier/buyer leads.
- Developed a **Product Catalog module** supporting both supplier-side (add/manage products) and buyer-side (browse/search/purchase) experiences.

Asset Management Application

- Developed an asset management solution (Node.js/React) with geotagging using Google Maps APIs for real-time asset tracking.
- Implemented 2-way and 3-way invoice/PO matching to streamline financial reconciliation.

Master Data Governance Platform

- Built master data governance applications for key business entities including Bill of Materials (BOM) and Business Partner records, ensuring data consistency and approval-driven workflows.

Warehouse Management Solution

- Developed a warehouse management application with a custom invoice generation module using **Node.js** (backend) and **React** (frontend).
- Added advanced features including QR code generation via APIs consumed by a companion Flutter mobile application.

EDUCATION

Global Academy of Technology - Bachelor of Engineering (CGPA: 8.56)	2018 - 2022
RNS Pre-University College - Pre-University Education (81%)	2016 - 2018
Vishwa Venkateshwara International School - High School Education (88.96%)	2016

CERTIFICATIONS & ADDITIONAL TRAINING

- Python Full Stack Development - Pyspiders (2021-2022)
- Python Data Structures - Coursera (August 2020)
- Programming for Everybody - Coursera (August 2020)
